

POS_T - Roller Feed

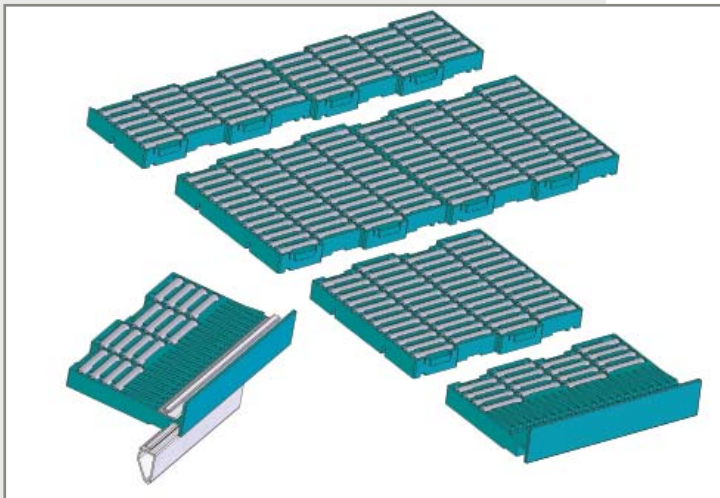

The POS τ - Roller Feed System

Use the POS τ - Roller Feed to achieve an optimised presentation of your products at the front of shelf, promoting impulse purchases at the point of sale. The POS τ - Roller Feed is perfect, not only for products in cartons, plastic cups, cans or bottles, but also for heavy (and/or) large products such as six-packs or beverage packs. (The POS τ - Product Pusher is the ideal solution for products with soft or very small bases such as paper bags, tubes or mini-sized packaging.)

A gentle slope and gravity allow your products to automatically advance to the front edge of any shelf without any additional manual operation, and is suited to both the ambient and chilled environments.

The POS τ - Roller Feed can be retro fitted to on any existing horizontal shelving system or product presenter. Shelves are still able to be closely spaced despite the “slope”.

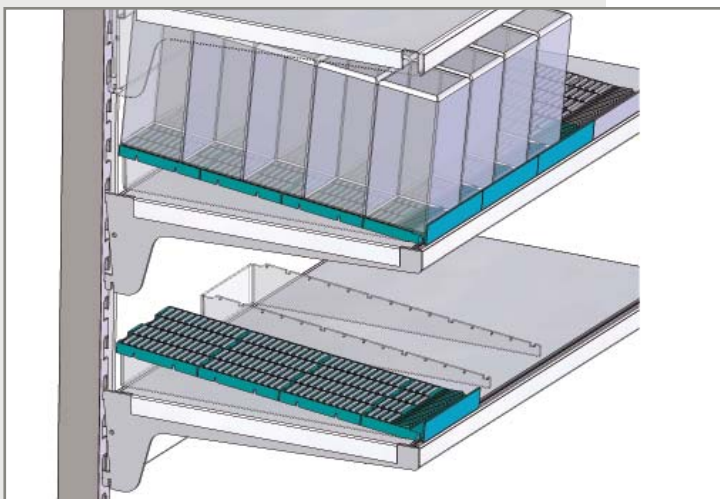

Compatibility with the POS τ - Shelf Management system guarantees a lasting and reliable implementation of your shelf stocking plans. No major shelf re-organisation is required for range or product changes, just simply re-position the shelf dividers!

The POS τ - Roller Feed consists of 124 mm wide modules permitting depths of 280 mm to 580 mm in 50 mm increments.

Connectors are used to link the modules in width and depth.

“Brake skids” and a low front riser provide for a gentle stop and ease of handling during product removal.

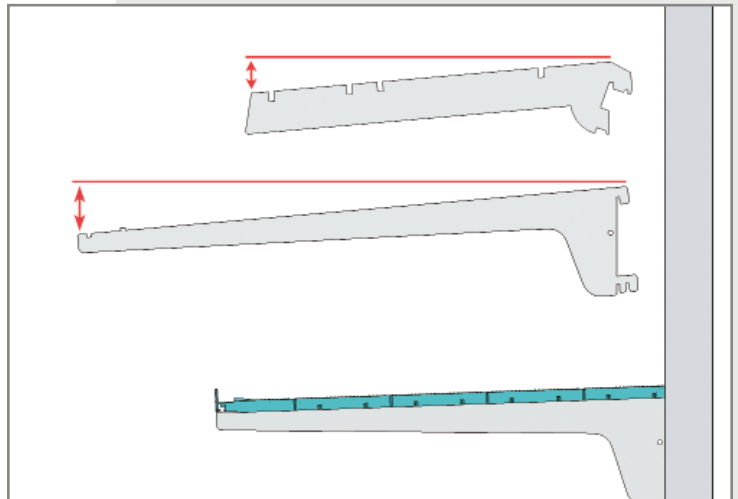

The use of wedge inserts permits the POS τ - Roller Feed to also be utilised on existing horizontal shelves.

This allows not only entire shelves to be equipped, but also shelf sections customised to product type.

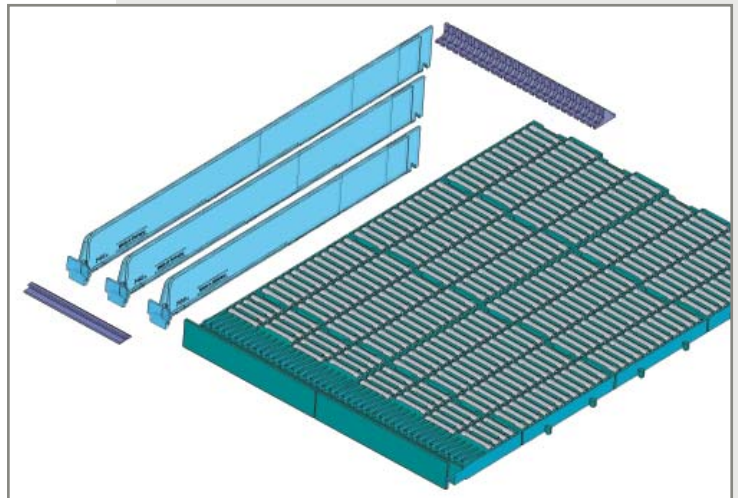

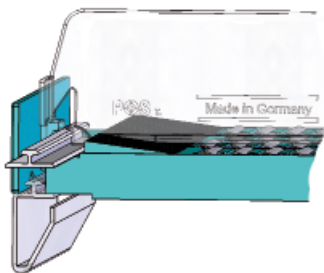

...complete solutions for all purpose

We offer optimally inclined consoles for all commercial shelving systems.

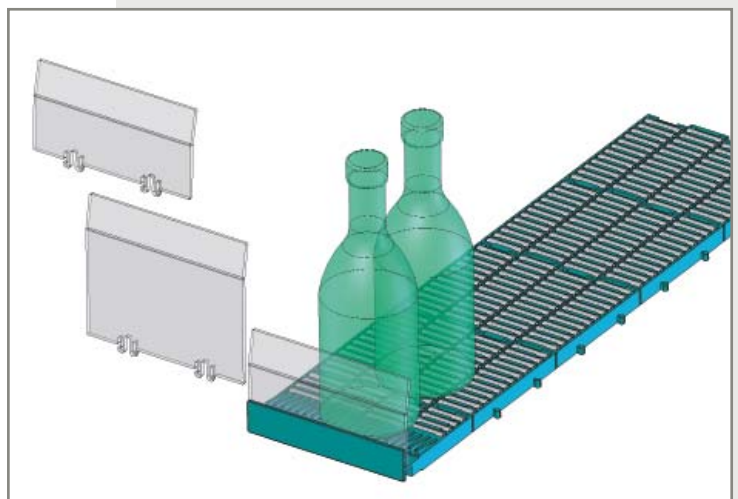

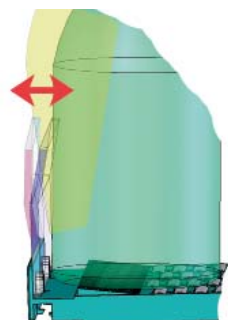

The shelves can be closely and, therefore, cost-effectively spaced, since only a very minimal inclination is required.

Shelf dividers can be placed in variable positions, yet still be secured, to ensure order, accustomed on-shelf location and the easy implementation of your planograms.

A clear and resilient front edge insert provides for a safe presentation of tall products that may have a danger of tipping.

Application examples

SIX-PACK of BEER

Wine, Spirits or Sparkling Wines

Tetra Pak (Juice, Tea, Milk ...)

Ketchup or Salat dressing

Cans

Dairy products

The Advantages of the POS T- Roller Feed...

- the roller feed system is an ideal complement to the POS T-Product Pusher System
- an optimal front presentation creates clarity and is the basis for promoting impulse purchasing
- shelf maintenance is reduced leading to a saving in labour costs
- particularly suitable for back loading (e.g. chilled environments)
- the first in - first out principle is effectively implemented
- versatile – no major shelf re-organisation is required for range/product changes. If necessary just simply re-position the shelf dividers according to the new planogram
